

Azure Guide for CS224n

This guide will help you setup and use Azure Virtual Machines for your final project. Before we start, it cannot be stressed enough: **do not leave your machine running when you are not using it**. The expected time to complete the setup guide is **15 min** to **1 hour**, depending on which configuration you opt to take.

Your Azure subscription for this class

Microsoft has generously agreed to sponsor CS224n, and has provided us with Azure credit to distribute to CS224n students. We expect that there will be enough credit for teams to run as many experiments as they need for their projects. **However, it's very important for students to manage their credit carefully, so that they can get the most out of it (see next section).**

You should receive an email on Tuesday or Wednesday (Feb 13/14) with an invitation to claim your initial Azure credit of **\$150**. Credit has been assigned per team (according to the teams you

gave us in your project proposal), with the same amount allocated regardless of team size. The \$150 corresponds to about **130 hours**, or slightly over **5 days** on a NV6 machine.

The \$150 is an initial allocation. If you use it up running *genuine* experiments, that's **perfectly OK and completely expected** – we expect that most teams will need more credit, and we have plenty more to give you. However, please don't use up your credit by leaving your machine running when you're not using it! Nor should you use up many hours of credit using your VM to write your code (see next section).

When you run out of credit (or before you run out), you can ask us for more on Piazza using the "azure" tag.

Best practices for managing your Azure credit

Azure virtual machines are charged at a flat rate, for each minute that they are turned on.

This is irrespective of:

- whether you are ssh'd to the machine at that time
- whether you are running any processes on the machine at that time
- the computational intensity of the the processes you're running
- whether you're using GPUs

Therefore, the most important thing you need to do to, to manage your Azure credit, is to **carefully turn your VM on and off just when you need it**. If you are using a NV6 VM, it is charged at **\$1.14/hour** while it is turned on.

We advise you to **develop your code on your local machine** (for example your laptop with the CPU version of TensorFlow installed) for debugging (i.e., work on your new code until you are able to complete several training iterations without errors), then run your code on your Azure VM when it's time to train on a GPU.

*Note: we have provided you with a [Practical Tips for Final Projects](#) document which gives tips on how to sync your code between your laptop and your VM, how to use *tmux* to manage your sessions in your VM, and how to monitor your memory/CPU/GPU usage.*

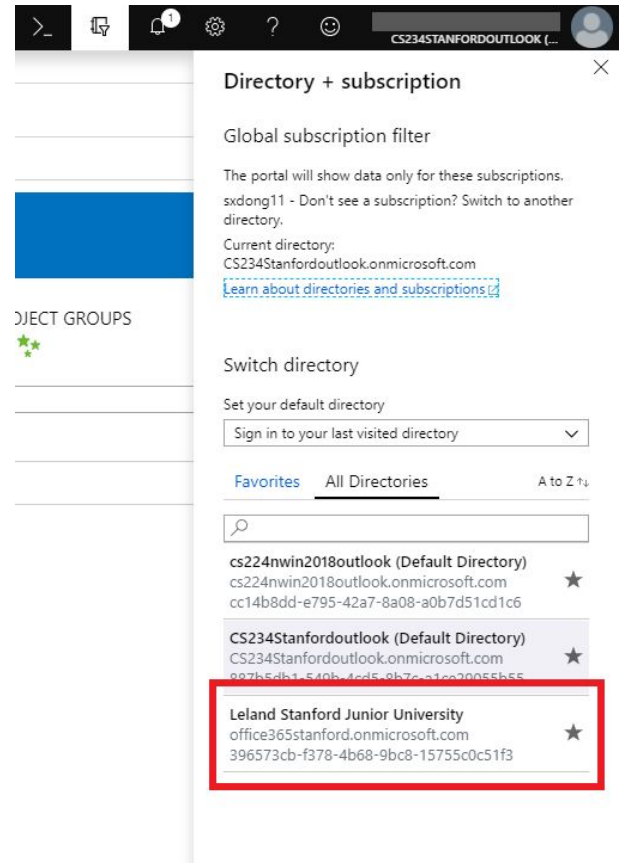

Azure also has an [auto-shutdown feature](#) that allows you to specify a time when you want your VM to turn off - this allows you to turn off the machine at a time when you are unable to do it manually. For example, if you start an experiment at 9 p.m., and you want to stop it after 5 hours, you can set auto-shutdown to turn your VM off at 2 a.m. This will prevent you spending credit that you would have otherwise spent until you woke up many hours later to turn off the VM.

See FAQs of this document to learn how to check your balance.

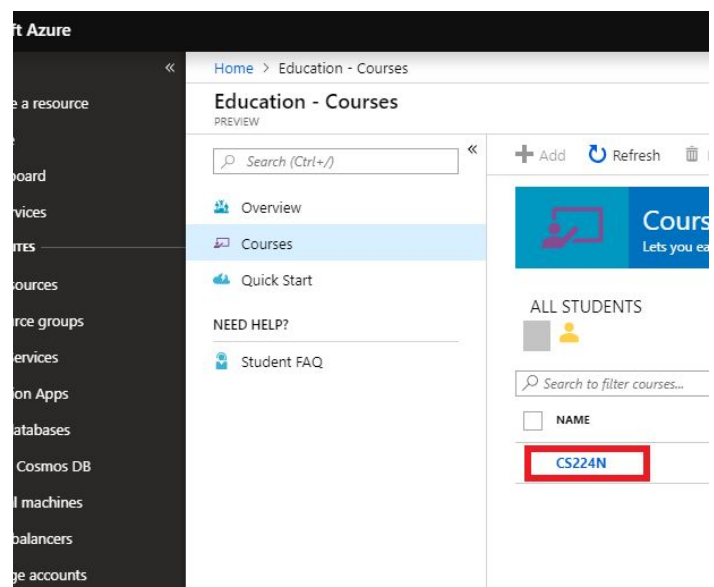

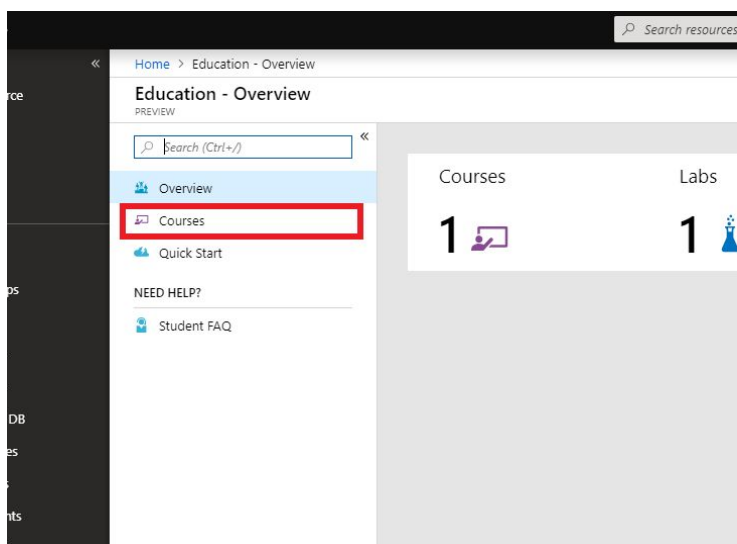

Configuring your Azure VM

Creating an Azure account (5 min)

Login to your account at portal.azure.com using your stanford.edu email address and make sure your **Active Directory** (shown under your email address in the top right corner) is **Leland Stanford Junior University**. If you have multiple subscriptions (e.g. you're sharing the same email account for CS 224N with another course using Azure like CS 234 or CS 273B), click on the **Account Menu** in the top-right corner, select **Switch directory**, and choose **Leland Stanford Junior University**.

Go to portal.azure.com/#blade/Microsoft_Azure_Education/EducationMenuBlade/overview. Click on **Courses**. You should see **CS224N** in your list of courses. If you don't see the course for CS224N, see Piazza for detailed instructions.

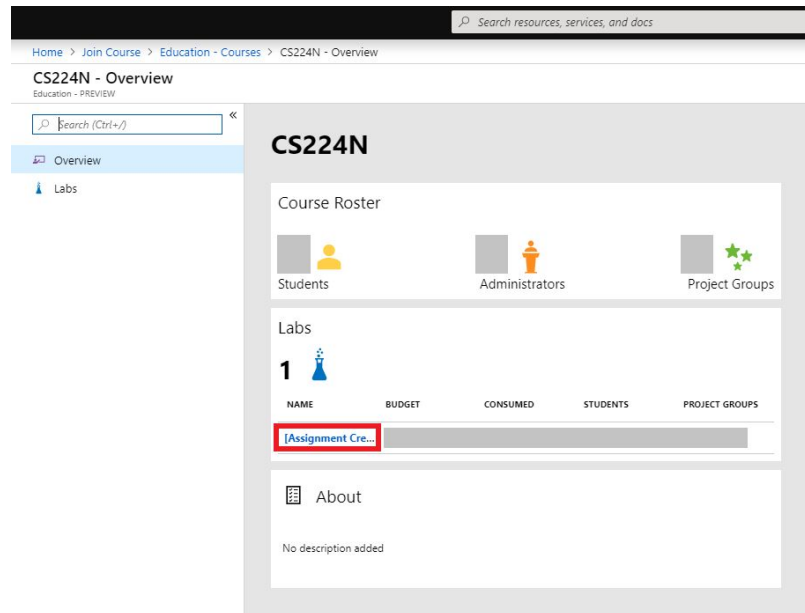

Activating your subscription (5 min)

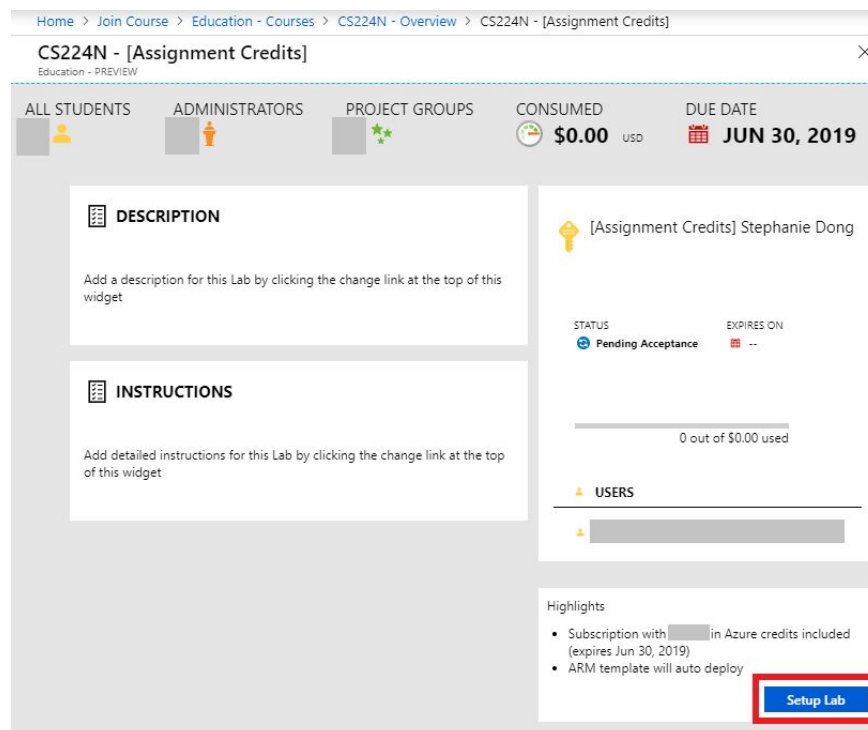

Click on **CS224**. Under **Labs**, is where you will see your Azure credit subscriptions. You will be receiving credits for assignments and project separately.

If you are following this guide for assignments that require Azure, you should see **[Assignment Credits]**. Click on **[Assignment Credits]**.

If you are following this guide for the final project, you should see **[Project Credits]**. Click on **[Project Credits]**.

You should be brought to an overview page for your Azure subscription for either the assignments or the project. Click on **Setup Lab** to activate your subscription. If you don't see the option for **Setup Lab**, and your **STATUS** says **Accepted**, then you have already done this step.

If this is your first time activating a subscription under Azure, you may be brought to the agreement page. **Fill in your information** and click **Next** and **Sign up**. It may take a few minutes for the next page to load after you click **Sign up**.

Creating a VM (15-45 min)

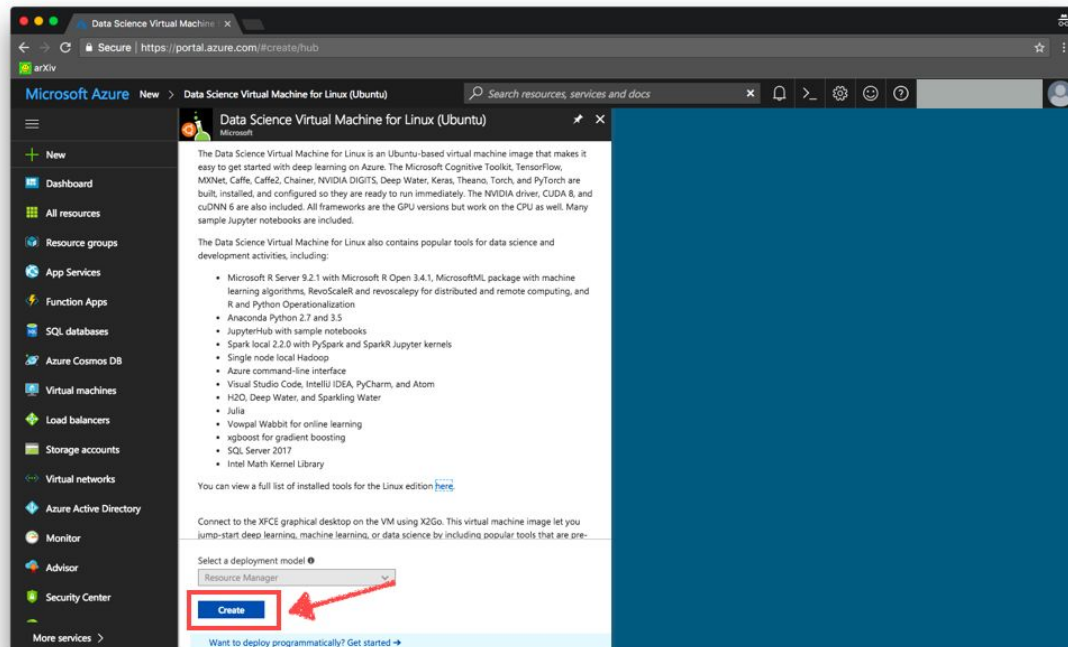

Using a predefined image (15 min)

If you use a predefined image, we recommend using the **Data Science Virtual Machine for Linux (Ubuntu)** image, which comes installed with Python 3.5, tensorflow-gpu, CUDA, and cuDNN.

1. Click the **+ Create a Resource** in the left sidebar menu and type in **Data Science Virtual Machine for Linux (Ubuntu)**. It's essential that you select the Ubuntu and **not** CentOS distribution.

2. Click **Create**.

3. Fill in the following fields:

- **Subscription.** If you are working on assignments, you should choose the subscription starting with [Assignment Credits]. If you are working on projects, you should choose the option starting with [Project Credits]. The VM that you create will use Azure credits from the subscription chosen, and can (for the most part) not be transferred. If you don't see the subscription that you are looking for, make sure you follow the section above on *Activating your subscription* carefully. If that still does not resolve your issue, post on Piazza for assistance.
- **Resource group.** If you create multiple VMs, those within the same resource group will share resources. Unless you create multiple VMs, this configuration does not matter, so click **Create New** and type `cs224n-gpu`.
- **Virtual Machine Name.** This will be the name of your VM. You can name it whatever you want. I named mine `cs224-dev-VM1`
- **Region.** Chose `East US`
- **Image.** Make sure this is `Data Science Virtual Machine for Linux (Ubuntu)`
- **Size.** Click on `Change size` and search for `NV6`. Select `NV6`. You may need to clear all filters. See screenshots below.
- **User name.** This will be the username used on the VM. You can name yourself whatever you want. I named myself `steph`. Since it's most convenient for all of the people in your group to share one user account, it might make more sense to use the name `group` or `team` or `<team-name>` like `purple-elephants`. (I bet

your favorite language model didn't expect to see purple elephants in an Azure walkthrough...)

- **Authentication type.** If you are not familiar with SSH keys, authenticate using password; otherwise, choose whichever you prefer. I chose a secret password.

Microsoft Azure

Home > New > Data Science Virtual Machine for Linux (Ubuntu) > Create a virtual machine

Create a virtual machine

Basics | Disks | Networking | Management | Guest config | Tags | Review + create

Create a virtual machine that runs Linux or Windows. Select an image from Azure marketplace or use your own image. Complete the Basics tab then Review + create to provision a virtual machine with default parameters or customize.

5. Wait for the configuration to validate. Click **Create**.

The screenshot shows the Microsoft Azure portal interface for creating a virtual machine. The left sidebar contains navigation links such as 'Create a resource', 'Home', 'Dashboard', 'All services', and 'FAVORITES'. The main content area is titled 'Create a virtual machine' and shows the 'Review + create' step. A green banner at the top indicates 'Validation passed'. Below this, there are tabs for 'Basics', 'Disks', 'Networking', 'Management', 'Guest config', 'Tags', and 'Review + create'. The 'Review + create' tab displays the following information:

- PRODUCT DETAILS**
 - Data Science Virtual Machine for Linux (Ubuntu) by Microsoft. Price: 0.0000 USD/hr. (Not covered by credits)
 - Standard NV6 by Microsoft. Price: 1.1400 USD/hr. (Subscription credits apply)
- TERMS**

By clicking "Create", I (a) agree to the legal terms and privacy statement(s) associated with the Marketplace offering(s) listed above; (b) authorize Microsoft to bill my current payment method for the fees associated with the offering(s), with the same billing frequency as my Azure subscription; and (c) agree that Microsoft may share my contact, usage and transactional information with the provider(s) of the offering(s) for support, billing and other transactional activities. Microsoft does not provide rights for third-party offerings. See the [Azure Marketplace Terms](#) for additional details.
- BASICS**

Subscription	Microsoft Azure Sponsorship 2
Resource group	cs224n-gpu
Virtual machine name	cs224n-dev-VM1
Region	East US
Availability options	No infrastructure redundancy required
Authentication type	Password
Username	steph
- DISKS**

OS disk type	Standard SSD
Use managed disks	Yes

At the bottom, there are buttons for 'Create', 'Previous', 'Next', and a link to 'Download a template for automation'. The 'Create' button is highlighted with a red box.

6. You've created a VM! Continue to [Using Azure](#).

NOTE: If you do not plan on using your VM right now, stop the instance **right now**. The VM is automatically started up when it is created. Follow the instructions below to stop your VM.

Using Azure

Managing a VM

1. Click the **All resources** in the left sidebar menu. If it is not on the left sidebar, click on **All services** in the sidebar, and **All resources** from there.

2. Click the name of your VM. You might need to **wait up to 10 minutes** after creating the VM for it to appear on this menu.

Microsoft Azure

Home > All resources

All resources

Subscriptions: Microsoft Azure Sponsorship 2

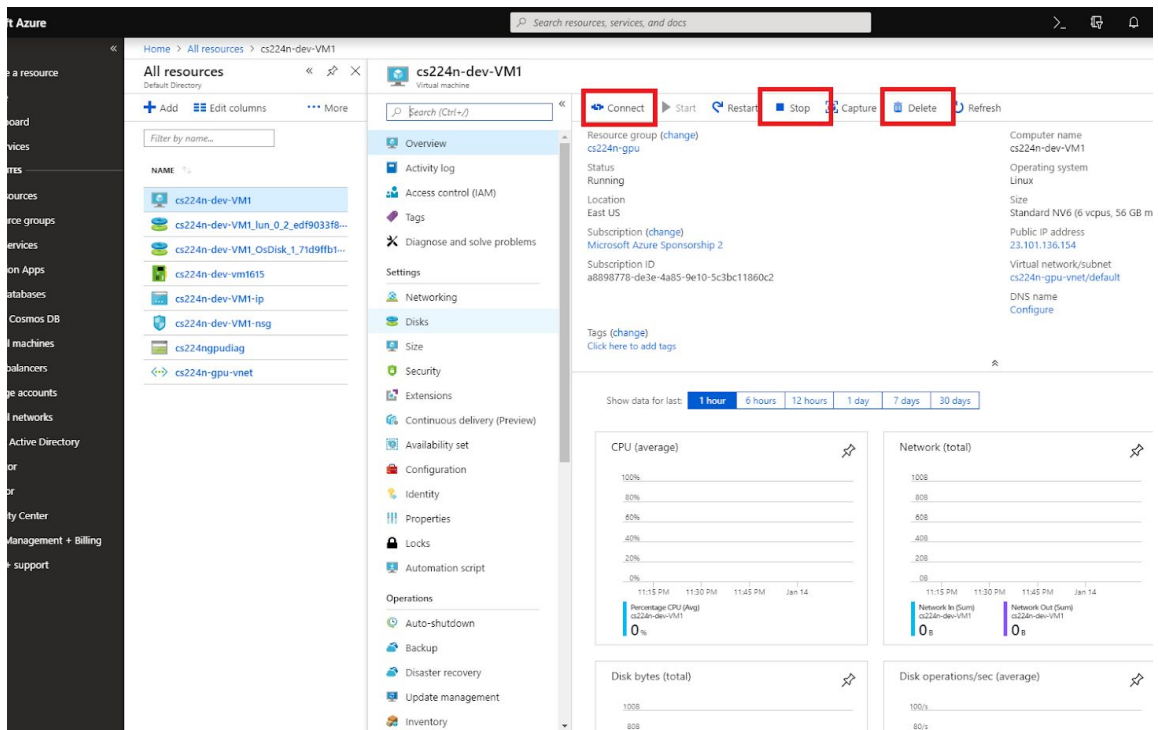

Filter by name... All resource groups All types All locations

8 items ☐ Show hidden types

NAME	TYPE	RESOURCE GROUP	LOCATION
cs224n-dev-VM1	Virtual machine	cs224n-gpu	East US
cs224n-dev-VM1_lun_0_2_edf9033f88be4835b21b8e5e61fb0a32	Disk	CS224N-GPU	East US
cs224n-dev-VM1_OsDisk_1_71d9ffb1b084d49a299604bcbe3f2fa	Disk	CS224N-GPU	East US
cs224n-dev-vm1615	Network interface	cs224n-gpu	East US
cs224n-dev-VM1-ip	Public IP address	cs224n-gpu	East US
cs224n-dev-VM1-nsg	Network security group	cs224n-gpu	East US
cs224nngpudiag	Storage account	cs224n-gpu	East US
cs224n-gpu-vnet	Virtual network	cs224n-gpu	East US

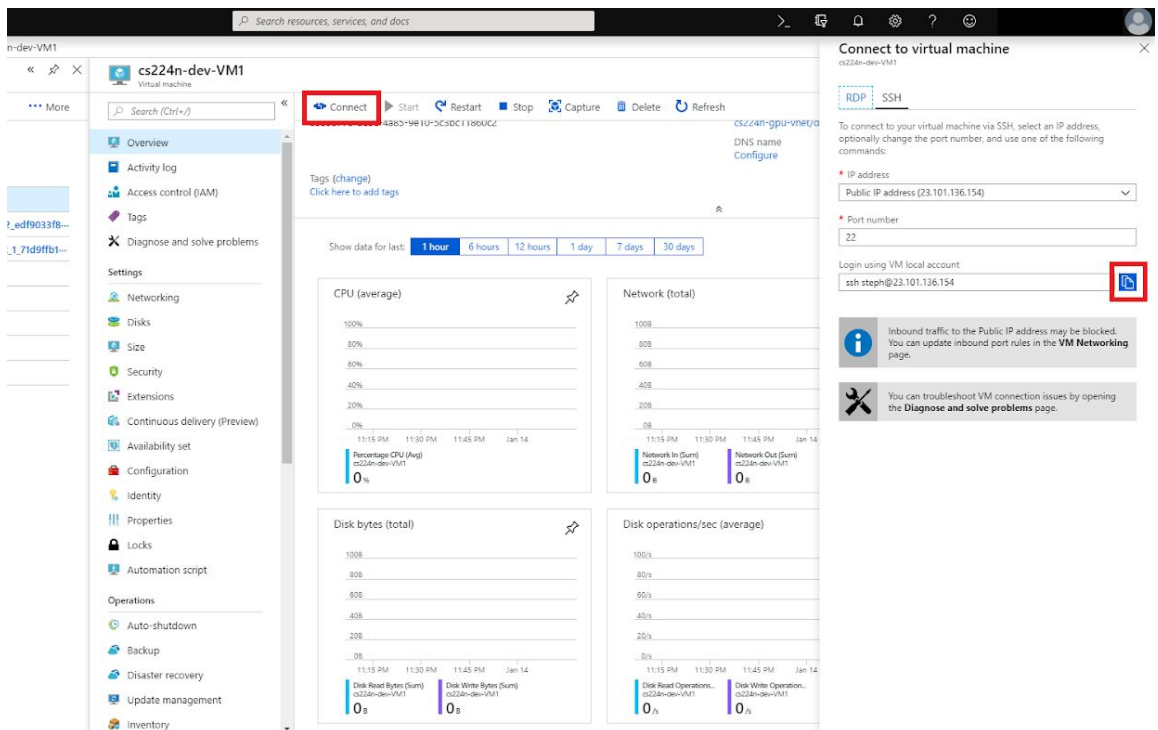

3. There are a few important options. Click **Connect** for an ssh command to connect to your instance. Click **Start/Stop** to start or stop the instance. If you want to delete the instance, click **Delete**.

*Note that if your instance is stopped but not deleted, it will still accrue charge for storage. (This cost is somewhat minimal.) If your instanced is not stopped or deleted, it will accrue charge for storage and VM. Again, **do not leave your machine running when you are not using it.***

Connecting to a VM

1. Click **Connect** from the previous menu. In the right side panel that pops up, click on the copy icon, and paste the ssh command into your terminal

```

steph ~/workspace
steph ~/workspace ssh steph@40.117.81.218
The authenticity of host '40.117.81.218 (40.117.81.218)' can't be established.
ECDSA key fingerprint is SHA256:PH+XtvxN8rP3CJYRmx+3ckdWVFZw/d9amDm5ooGNDjs.
Are you sure you want to continue connecting (yes/no)? yes
Warning: Permanently added '40.117.81.218' (ECDSA) to the list of known hosts.
steph@40.117.81.218's password:
Welcome to Ubuntu 16.04.5 LTS (GNU/Linux 4.15.0-1035-azure x86_64)

4 packages can be updated.
0 updates are security updates.

The programs included with the Ubuntu system are free software;
the exact distribution terms for each program are described in the
individual files in /usr/share/doc/*/copyright.

Ubuntu comes with ABSOLUTELY NO WARRANTY, to the extent permitted by
applicable law.

*****
* Welcome to the Linux Data Science Virtual Machine on Azure!
*
* For more information on available tools and features,
* visit http://aka.ms/dsvm/discover.
*****

To run a command as administrator (user "root"), use "sudo <command>".
See "man sudo_root" for details.

steph@cs224n-dev-VM1:~$

```

2. Check that Pytorch can access the GPUs by opening Python and typing the following:

```

import torch
torch.cuda.current_device()
torch.cuda.device(0)
torch.cuda.device_count()
torch.cuda.get_device_name(0)

```

You should see something like this:

```

steph@cs224n-dev-VM1:~$ python
Python 3.5.5 |Anaconda custom (64-bit)| (default, May 13 2018, 21:12:35)
[GCC 7.2.0] on linux
Type "help", "copyright", "credits" or "license" for more information.
>>> import torch
>>> torch.cuda.current_device()
0
>>> torch.cuda.device(0)
<torch.cuda.device object at 0x7f0591738240>
>>> torch.cuda.device_count()
1
>>> torch.cuda.get_device_name(0)
'Tesla M60'
>>> |

```

If you see an error message about CUDA, post to Piazza for assistance.

FAQs

How do I check my remaining balance?

Go to the Labs under the CS224N Azure page from

https://portal.azure.com/#blade/Microsoft_Azure_Education/EducationMenuBlade/overview

Note that Azure bills at midnight every business day, so this figure usually reflects your credit as of the last billing time. Also, note that you will only see your subscription after it is activated.

Instructions for activating your subscription(s) is in section *Activate your subscription* above.

How do I share my instances with other students in my group?

For shared subscriptions only, once an instance and user account on that instance has been created using a subscription, all accounts linked to that subscription can see that instance on their dashboard and follow the directions in Using Azure to manage and connect to their VM.

Only the subscription created for the final project is shared.

How do I create new user accounts?

If your group feels strongly about using separate user accounts instead of a shared one on your instance, please post privately on Piazza.

What happens when I exceed my credit?

Azure bills at midnight every business day. So if, at midnight on a business day, you have exceeded your credit, Azure will turn off your VM. Note that at this point, your account may be in debt. If/when this happens to you, let us know on Piazza and tag your post with the "azure" tag.

Can I add a personal credit card to the account?

Sure, though we do not recommend it. If you exhaust the funds from your CS 224N subscription, your personal credit card will be charged without warning.

Can I select more powerful instances?

Though we recommend the NV6, you are free to use any of the instances. Just keep in mind that you have a budget!
